

Transform your M365 Investments Into Measurable Business Value

From Cloud Complexity to Confident Control

Microsoft 365 is essential to how modern enterprises work, but its true cost, usage, and value are often hidden in complexity. As licensing models evolve and user behavior shifts, organizations struggle to forecast renewals, track adoption, and maintain compliance across a constantly changing environment.

Surveil for Microsoft 365 brings financial intelligence, usage optimization, and security oversight together in one unified platform – transforming data into decisions, and decisions into measurable business value. From licensing efficiency to Copilot readiness to compliance assurance, Surveil gives every leader the visibility, precision, and confidence to take control of their entire Microsoft estate.

ONE PLATFORM FOR TOTAL CLOUD CONFIDENCE

SMART TAGGING

Cost Context at Every Level

Turn raw license and usage data into business intelligence. Surveil automatically classifies spend by department, cost center, or business unit to make every dollar traceable and accountable.

FINANCIAL PLANNING

Control That Builds Confidence

Plan ahead with precision. Forecast renewals, set budget guardrails, and use Surveil's built-in Contract Center to model license quantities and pricing before you sign – all from your own tenant data.

AI RECOMMENDATIONS

Continuous Optimization

Continuously analyze your environment, uncovering inactive identities, redundant licenses, and underused apps. Ai-driven recommendations deliver tangible savings while improving collaboration efficiency.

GOVERNANCE

Security, Compliance, and Adoption in Sync

Monitor MFA, risky sign-ins, and Copilot usage in real time with insights that give IT, Finance, and Security teams a shared foundation to govern confidently and act decisively.

3 KEY CAPABILITIES OF SURVEIL FOR AZURE

1 Inform & Optimize: From Insight to Action

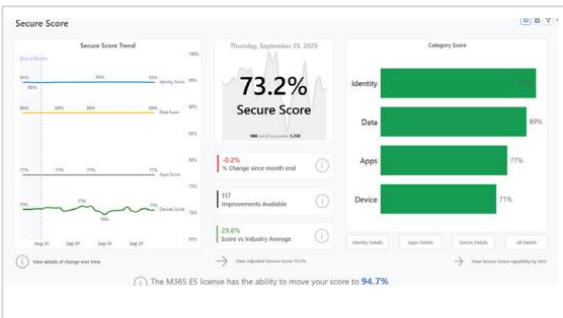

- **Contract Center:** Build data-driven renewal models, powered by live tenant data and Surveil recommendations.
- **License Intelligence:** Identify underutilized or duplicate subscriptions, and right-size spend per user or department.
- **Device Lifecycle Management:** Track upgrade readiness, device age, and Windows 11 compliance for better refresh planning.

2 Maximize Copilot ROI: Readiness, Usage, and Measured Impact

- Identify ideal Copilot candidates based on productivity data, collaboration frequency, and user patterns.
- Measure real-time usage to assess adoption progress and prove ROI.
- Quantify value with built-in **Copilot Compass** insights and benefits calculators that translate activity into business impact.

3 Secure Identities & Strengthen Governance: Trust Starts with Visibility

- Detect inactive accounts and mitigate access sprawl.
- Monitor MFA and Conditional Access adoption.
- Identify risky sign-ins and potential insider threats.
- Align cost reduction, identity hygiene, and compliance into one control loop.

Surveil for Microsoft 365 is the answer to rising licensing costs, unpredictable renewals, and blind spots in usage and compliance. No more guessing. No more waste. Just confident, data-driven control of your M365 environment.
